Business Insights & Recommendations

Smart E-Commerce Intelligence

Total Revenue	Total Orders	Repeat Rate	Cancellation Rate
₹116.15M	500	95.0%	10.60%

1. Project Overview

EcomIQ is an end-to-end Power BI business intelligence project designed to transform e-commerce transaction data into actionable insights. The project covers sales performance, customer behaviour, product and inventory performance, order and payment operations, customer value and retention, and executive-level decision support.

2. Executive Summary

The business generated total revenue of ₹116.15M from 500 orders, with 4.55K units sold and an average order value of approximately ₹232.31K. The customer base consists of 100 customers, of whom 95 are repeat customers, producing a repeat rate of 95%. Electronics is the leading revenue category. Operationally, the cancellation rate is 10.60%, while the delivery rate is 69.80%, highlighting an opportunity to improve order fulfilment and delivery performance.

3. Key Business Insights

3.1 Sales Performance

- Total revenue reached ₹116.15M across 500 orders.
- Revenue showed seasonal variation, with the dashboard identifying April and August as peak revenue periods.
- Electronics is the strongest revenue-generating category, followed by Sports.
- Mumbai and Bengaluru are the leading revenue-contributing cities and together contribute more than 30% of sales.
- The highest individual product revenues shown in the dashboard include Eco Similique (₹52.22 lakh), Eco A (₹50.80 lakh), and Smart Iste (₹48.16 lakh).

3.2 Customer Insights & Behaviour

- The business has 100 total customers and 99 active customers.
- 95 customers are repeat customers, resulting in a very strong 95% repeat customer rate.
- Only 5 customers are classified as one-time customers in the repeat-versus-one-time view.

- The high repeat rate indicates strong customer loyalty and suggests that existing customers are an important source of recurring revenue.
- Customer activity and signup trends are tracked over time, allowing management to monitor customer acquisition patterns.

3.3 Product & Category Performance

- A total of 50 products are represented in the product analysis.
- Total quantity sold is 4.55K units, while available stock is approximately 14K units.
- Electronics generates approximately ₹39M in revenue and is the leading category.
- Sports follows with approximately ₹33M, while Books, Home & Kitchen, and Clothing generate lower revenue.
- Inventory health is generally strong: 35 products (70%) are classified as Healthy Stock, 12 (24%) as Medium Stock, and 3 (6%) as Low Stock.
- The Low Stock products require attention because stockouts could result in lost sales opportunities.

3.4 Orders & Payment Operations

- The business processed 500 total orders, of which 349 were delivered.
- The delivery rate is 69.80%.
- 53 orders were cancelled, producing a cancellation rate of 10.60%.
- Revenue is diversified across payment methods. Net Banking is the largest payment-method contributor at approximately ₹29.78M (25.64%), followed by Debit Card at approximately ₹28.16M (24.24%).
- Cash on Delivery, Credit Card, and UPI also contribute meaningful revenue, indicating that customers use multiple payment options.
- Mumbai is highlighted in the dashboard as a key cancellation concern and should be investigated operationally.

3.5 Customer Value & Retention

- The dashboard identifies 99 active customers and 95 repeat customers.
- Customer segmentation includes Repeat, High Value, Occasional, One-Time, and No Purchases groups.
- The loyalty mix is dominated by Repeat customers, demonstrating strong retention.
- A Top 10 High-Value Customer analysis identifies customers generating high revenue and/or placing frequent orders.
- Revenue contribution by customer segment provides an opportunity to focus marketing and service strategies on the most valuable customer groups.

4. Business Recommendations

4.1 Strengthen High-Performing Categories

Electronics and Sports are the strongest revenue categories. Increase targeted advertising, promotional campaigns, and cross-selling efforts around these categories while maintaining adequate inventory for high-demand products.

4.2 Launch a VIP Loyalty Program

With a 95% repeat customer rate and a distinct High Value segment, introduce a VIP loyalty program offering exclusive benefits, early access, personalized offers, or rewards to protect and grow customer lifetime value.

4.3 Reduce Cancellations

The 10.60% cancellation rate should be investigated by city, payment method, product, and order status. Mumbai should receive immediate attention because the dashboard highlights it as a key cancellation concern. Review shipping partners, delivery timelines, stock availability, and order confirmation processes.

4.4 Improve Delivery Performance

A 69.80% delivery rate leaves room for operational improvement. Track pending and returned orders, identify bottlenecks, and establish city-level delivery performance monitoring to improve fulfilment reliability.

4.5 Prevent Stockouts

Although 70% of products have Healthy Stock, 6% are classified as Low Stock. Create replenishment alerts for low-stock products, particularly high-revenue or high-demand products, to prevent lost sales.

4.6 Use Payment Insights for Customer Experience

Maintain and optimize the payment methods that generate the highest revenue. Since payment revenue is distributed across multiple methods, avoid over-reliance on a single payment channel and monitor payment-method preferences over time.

4.7 Focus on High-Value Customers

Use the Top 10 High-Value Customer analysis to create personalized retention campaigns. High-value customers should receive tailored communication and premium service because retaining them can protect a significant share of revenue.

5. Recommended Management Actions

Immediate priorities:

1. Investigate cancellations in Mumbai and other high-cancellation locations.
2. Replenish all Low Stock products.
3. Increase marketing focus on Electronics and Sports.
4. Protect high-value and repeat customers through targeted loyalty initiatives.
5. Improve delivery performance by monitoring pending, returned, and cancelled orders.
6. Review monthly revenue patterns before peak periods such as April and August to prepare inventory and campaigns.

6. Conclusion

EcomIQ provides a unified view of the organisation's e-commerce performance. The analysis shows strong revenue generation, a highly loyal customer base, strong performance from Electronics and Sports, and generally healthy inventory. The main improvement opportunities are reducing cancellations, improving delivery performance, proactively managing low-stock products, and converting customer loyalty into greater lifetime value. By acting on these insights, management can make more data-driven decisions and improve both growth and operational efficiency.
